

CLAIMS

1. A medical cup for dispensing liquids and solids comprising:
 - an entirely flat bottom 12 having a linear edge 21 and a curved edge 23;
 - two sides 14, 16, extending upwardly from said bottom to form a rim 26 at a top of said cup; and,
 - a ramp-like mouthpiece portion 19 extending outwardly and upwardly from said linear edge 21 of said bottom at least part way to said rim, said ramp-like portion having the shape of an isosceles triangle with the base of the triangle collinear with said linear edge of said flat bottom;
 - said two sides 14, 16, and said ramp-like mouthpiece portion 19 joining to form a leakproof fluid container.
2. A medical cup for dispensing liquids and solids comprising:
 - an entirely flat bottom 12 having a curved edge 23 and a linear edge 21;
 - a top rim 26;
 - a ramp-like mouthpiece portion 19 having the shape of an isosceles triangle extending outwardly from said linear edge of said bottom 12 to a top rim 26 with the apex of the ramp-like mouthpiece disposed on said top rim and the base of the ramp-like mouthpiece coextensive with said linear edge of said bottom; and,
 - two curved sides, 14, 16, extending upwardly from said curved edge 23 of said bottom 12 to said top rim 26, said two curved sides joining said ramp-like mouthpiece portion and meeting at a short edge 18 opposite said ramp-like mouthpiece portion; said short edge 18 being shorter than said extended ramp-like mouthpiece portion, said short edge 18 extending from said bottom 12 outward at an angle Φ from said bottom 12;wherein said entirely flat bottom and said two curved sides form a leakproof fluid container.
